

List of Trait Codes

What follows is a comprehensive list of the socio-cultural traits found in the following four Northeast African countries: Ethiopia before the Eritrean Independence; Kenya; Somalia; and the Sudan. Each trait is represented by a unique string code, and each code is input directly to the corresponding virtual state. Note, however, that some of the traits listed below do not end up being reflected in the list of *PopCells' Traits* of the corresponding virtual states. This is due to the crudeness of spatial resolution, as well as the fact that some of the traits have a relatively narrow range of spread. This causes certain traits to become overlapped with other traits during the data conversion process.

Traits in the ethnicity category have up to two additional subclasses. Each trait, which consists of the “ethnicity” class, followed by the two additional subclasses, is represented by a series of three two-digit strings with “00” denoting nonexistence of the corresponding subclass. The following list is based on the most detailed data available at present. Note, however, that with the exception of virtual Somalia, all of the reported simulations were conducted without introducing any subclass to the virtual states. In other words, only the first two digits of the codes matter in most of the cases.
